

ScanIt Vehicles

Getting Started

Updated July 2026

What ScanIt Vehicles is

ScanIt Vehicles (SIV) is a wireless barcode inventory system for the dealership lot. Staff walk the lot with a rugged Android handheld scanner and scan every vehicle's VIN/barcode to reconcile what's physically present against the dealership's inventory list (pulled automatically from your DMS). It replaces clipboard counts and "where is that car?" searches, answering "what's actually on the ground vs. what the system thinks we have." Each scan also records a timestamp and GPS location, building a per-vehicle movement history and supporting lot-position reporting. Unlike Smartelematics (near-real-time GPS trackers installed in each vehicle), SIV has no per-vehicle tracking device or ongoing cellular cost — you scan on a schedule (typically a same-day lot audit) rather than tracking every vehicle continuously live.

The same handheld that scans the lot also prints stock stickers, key tags, and window addendum stickers using its built-in label printer, so vehicle check-in and lot auditing both happen from a single device.

Signing in

Web dashboard

Go to siv.smartelematics.com and sign in with your email + password. Accounts are created by your dealership/corporation admin — there's no public sign-up. No login yet? Ask your admin to add you (Corporation Settings ? Users), then use [Forgot Password](#).

Handheld scanner

Open the ScanIt Vehicles app on the handheld, enter your [Email](#) and [Password](#), and tap [Login](#) (turn on [Remember Email](#) to save it). Same credentials as the web dashboard. If your login covers more than one dealership, pick the dealer after signing in or via [Change Dealer](#). The app auto-checks for updates at login.

The handheld scanner

The scanner app runs on rugged Android handhelds — [Chainway C66](#) and [Chainway C72](#) — using the device's built-in barcode scanner (physical trigger), not the phone camera. Beyond scanning, the handheld's built-in label printer produces:

- [Stock stickers](#) — printed at vehicle check-in, on custom layouts.
- [Key tags](#) — barcode + stock # tags for the key board.
- [Window addendum stickers](#) — dealer-specific option/add-on disclosures.

The handheld also supports vehicle check-in (new, used/trade-in, and batch check-in of multiple vehicles at once). See the [Scanning Manual](#) for full step-by-step instructions on scanning, printing, and check-in.

The web dashboard

The dashboard shows your last DMS **Data Sync** and last **Scanner Sync** (with who synced), a **Pull Inventory** button, and stat tiles: **Total Inventory MSRP**, **Vehicles Scanned This Month**, and **Vehicles In Inventory**. Menus: Dashboard, Reports, Addendums.

Pull Inventory refreshes your vehicle list from your DMS on demand (instead of waiting for the scheduled sync). If one is running you'll see "Inventory pull already in progress." Your inventory comes from your DMS automatically — **CDK**, **DealerTrack**, or **Auto/Mate** — so you generally don't hand-enter vehicles; scanning reconciles the physical lot against that pulled list.

Where to find things

- **Reports** (Variance, Scan History, Not In Inventory) — see the *Variance & Reconciliation Reports — Quick Reference* guide.
- **Addendums** (Print, Options) — see the *Addendums — Quick Reference* guide.
- Step-by-step scanning, printing, and check-in instructions — see the *Scanning Manual*.
- Running a lot audit start-to-finish — see the *Physical Inventory — Quick Reference* guide.

Your account

Profile menu (top-right) ? **User Settings** for name/phone and alerts; **Change Password** to update your password. Admins add/disable users and send password resets under **Corporation Settings ? Users**.

Need more help? Click the ? in the top-right of the dashboard for the built-in chat assistant and the latest help documents, or contact support at **810-695-9332 / support@scanitvehicles.com**.
